

Streamline Your Review & Approval Processes with zipBoard

Enable your team to increase productivity and improve client satisfaction.

zipBoard's inbuilt features and integrations allow your internal team and external stakeholders to provide contextualized feedback on digital assets and manage tasks in a centralized platform.

Key Benefits

Improve quality – Reduce errors and rework

Your teams need to collaborate on documents constantly. And if a majority of their time goes into finding the most up-to-date document, issues, and checklists – they lose time and money. Efficient reviews help reduce errors and rework and improves the quality of digital assets in the feedback and approval process.

zipBoard helps streamline your digital assets and document review operations and gets your team more productive

Improve stakeholder collaboration

Easily add internal team members as collaborators and clients as reviewers with zipBoard's share review tool.

This streamlines the feedback and approval process and improves internal-external stakeholder collaboration as collaboration will take place in one centralized location.

Manage communications

Effectively manage communications by getting multiple stakeholders to review websites, documents, files, and communication for each content in one place. With zipBoard, you can manage multiple files, links, collaborators, feedback and tasks in one organized project.

You also get to integrate zipBoard with your favorite project management and communication tools like Wrike, Slack, Jira, and Microsoft Teams to enhance communication.

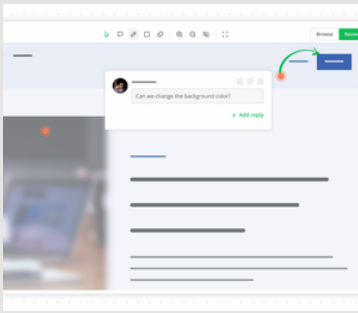

Ensure contextualized reviews

zipBoard's visual review and annotation tools (screenshots, video recording, annotations, and comments) allow your clients to leave contextualized feedback on the digital asset under review. And internal team members are also able to review the feedback and triage tasks accordingly. All in one place.

This streamlines your review and approval process and makes your team more productive and clients happier.

Reproduce issues easily

When clients report bugs, your team will know exactly what they are talking about and in what environment.

zipBoard captures all the details using screenshots and environment details to help reproduce the bugs easily. So rather than requesting a screen share call, you can easily reproduce the shared feedback.

Agile teams deserve streamlined solutions

zipBoard's collaboration solution serves as a centralized location for a streamlined visual review and approval process.

The all-in-one platform features as:

Projects

To enable you to create unlimited projects and manage your reviews and tasks in one place. Add all your reviewable content in one project or multiple.

Organization/ Team setup

So you can add managers, org admin, and clients to create different roles and accesses for different stakeholders.

Embeddable Widget

Install an embeddable widget to manage reviews using a script to capture screenshots and comments

Multiple media type

So you can gather reviews for multiple media websites or web app URLs, images, PDF , videos, HTML content, and SCORM files.

Comments or tasks

So your team and clients can have unlimited tasks and conversations in each project.

Phases

To break your project down into smaller chunks to track iterations and review cycles. Organized tasks, reviews and feedback into different phases.

Export & Share

So you can export tasks into a CSV format, and share reviews using instantly shareable links with unlimited users.

Integrations

Let your team integrate with other applications to streamline workflow or integrate using our API.

Branding

To create your org's branded URL for a more trusted experience - for enterprise accounts.

Notifications

To enable your stakeholders to get in-app and email notifications to keep track of relevant details for a project

Priority support

To make sure that you get attention for all your needs.

Personalized onboarding

So you can get a designated customer success manager to manage and onboard the workflows best suited for your team collaboration.

Open Roadmap

To get feedback and also inform all users.

Announcements

To make team-wide announcements with a single message.

Add response

To Keep conversations relevant and contextual by replying directly in the task. Add @mentions to point to a specific team member.

Spreadsheets

To enable you to bring your existing task lists and import them to a zipBoard project to get a start.

Reports

To inform you about Projects, Files, Tasks, Collaborators, comments, and screens.

Unlimited Collaborators

So you can invite unlimited collaborators on all projects to add reviews or assign tasks.

zipBoard by Numbers
